METHOD OF FIXING AT SITE

- * Level checking from ground to 1st Floor to obtained correct risers height.
- * Line alignment has to be checked thoroughly.
- * Preparing of cement mortar as per specification.
- * Risers have to be fixed with 1 cm – 2 cm of mortar and step has to be placed duly making a dry bed of cement to check this level. A nosing of 2cm has to be left. Also, we will have to make some of enough mortar & slurry has to be applied before final placement of step and then it has to be checked through a proper spirit level. The same procedure follows for entire fixing for Trapezoidal Step (mid landing steps). We need a template for accurate cutting. The same has to be supplied by the Contractor.
- * In case of slope skirtings the templates are required again. To achieve proper slope line we need to skirtings to be thrust 1 cm in the wall. If there is any wall plaster obstructing the skirting level the Contractor has to chip or break enabling us to fix uniformly.
